

Certificate of Analysis

Page 1 of 1

Client: International Food Europe SRL	Lab No: 2047633	SDSPV3
Contact: Francesco De Santis	Date Received: 13-Sep-2018	
C/- International Food Europe SRL	Date Reported: 23-Nov-2018	(Amended)
Via Nicola Coviello n 40	Quote No:	
Roma	Order No:	
00165	Client Reference:	
ITALY	Submitted By: Francesco De Santis	

Analysis Results

Sample Name:	Lab Number	Dihydroxyacetone (DHA) mg/kg	5-hydroxymethylfurfural (HMF) mg/kg	Methylglyoxal (MGO) mg/kg
18MY8	2047633.1	1,010	30	800

Analyst's Comments

Supplementary Report: This report is a supplement to an earlier report issued on the 20-Sep-2018. DHA, HMF and MGO only have been reported.

Amended Report: This certificate of analysis replaces an earlier certificate issued on 20 Sep 2018 at 2:19 pm
Reason for amendment: Client details amended.

Summary of Methods

The following table(s) gives a brief description of the methods used to conduct the analyses for this job. The detection limits given below are those attainable in a relatively clean matrix. Detection limits may be higher for individual samples should insufficient sample be available, or if the matrix requires that dilutions be performed during analysis. Unless otherwise indicated, analyses were performed at Hill Laboratories, 28 Duke Street, Frankton, Hamilton 3204.

Sample Type: Honey			
Test	Method Description	Default Detection Limit	Sample No
3-in-1 Honey Analysis	Aqueous extraction, derivatisation. Analysis by UPLC-UV (dihydroxyacetone, 5-hydroxymethylfurfural, methylglyoxal).	1.0 - 10 mg/kg	1

These samples were collected by yourselves (or your agent) and analysed as received at the laboratory.

Samples are held at the laboratory after reporting for a length of time depending on the preservation used and the stability of the analytes being tested. Once the storage period is completed the samples are discarded unless otherwise advised by the client.

This certificate of analysis must not be reproduced, except in full, without the written consent of the signatory.
